

Project Implementation:

On completing the development part, we then ran the application one last time to verify all the functionalities and look for any bugs in it. The user interface of the application looks a bit like the one provided below.

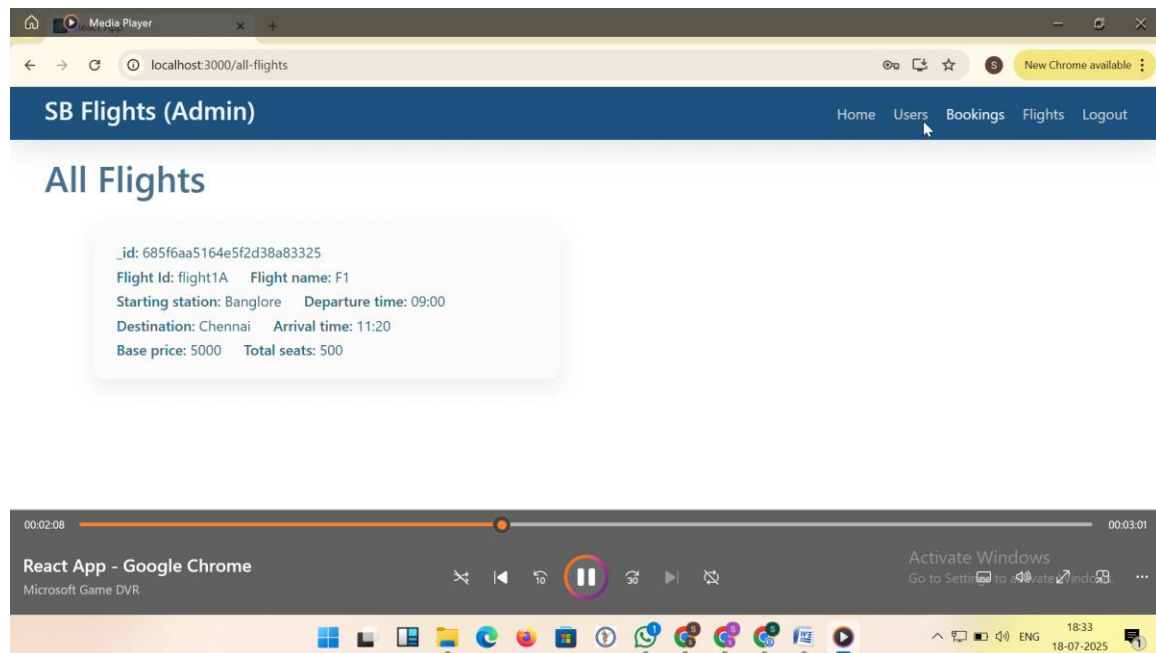

Landing Page :

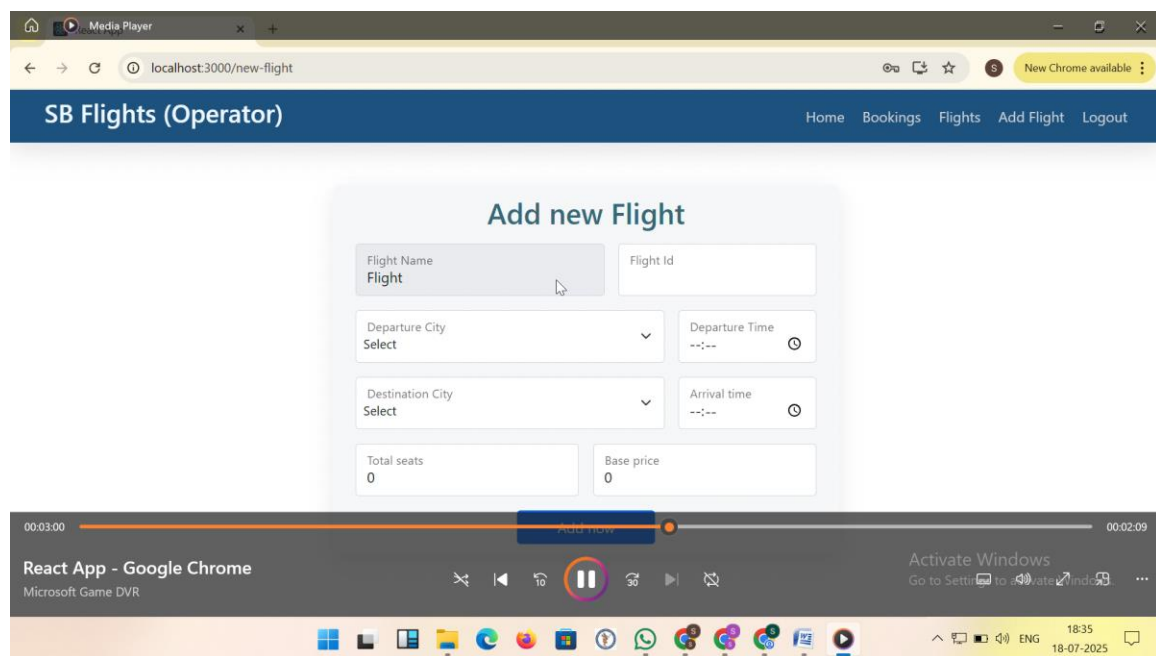

Admin Dashboard :

Users List :

Flights List :

Add New Flight :

The screenshot shows a web browser window with the URL `localhost:3000/new-flight`. The page title is "SB Flights (Operator)" and the navigation bar includes links for Home, Bookings, Flights, Add Flight, and Logout. The main content area is titled "Add new Flight" and contains a form with the following fields:

- Flight Name: Text input with the value "Flight".
- Flight Id: Text input.
- Departure City: Dropdown menu with the value "Select".
- Departure Time: Time picker with the value "--:--".
- Destination City: Dropdown menu with the value "Select".
- Arrival time: Time picker with the value "--:--".
- Total seats: Text input with the value "0".
- Base price: Text input with the value "0".

The form is displayed on a video player interface, with the video title "React App - Google Chrome" and the URL `localhost:3000` visible in the address bar.

Booking Management :

The screenshot shows a web browser window with the URL `localhost:3000`. The page title is "SB Flights" and the navigation bar includes links for Home, Bookings, and Logout. The main content area is titled "Book Your Next Flight with Confidence" and features a search form with the following fields:

- Return journey: Toggle switch.
- Departure City: Dropdown menu with the value "Hyderabad".
- Destination City: Dropdown menu with the value "Mumbai".
- Journey date: Date picker with the value "29-06-2025".
- Search: Button.

The form is displayed on a video player interface, with the video title "React App - Google Chrome" and the URL `localhost:3000` visible in the address bar. Below the search form, the text "Available Flights" is visible.

The demo of the Website is available at:
